

DIGITAL SOLUTION FOR COMPLIANCE & INTERNAL CONTROL

Dedicated to compliance officers

A constantly changing regulatory environment

Permanent regulatory changes in the financial sector make the role of the compliance and internal control officer increasingly complex. They must spend a considerable amount of time assimilating new regulatory requirements (directives, instructions, AMF/ACPR reporting, new policies, etc.) in addition to their daily tasks of implementing a risk management and control system.

In this context, since 2013, AGAMA Conseil, the French leader in the delegation of permanent and periodic controls to asset managers, has designed and developed BELT Solutions software.

Developed in SaaS mode, BELT has been designed for compliance officers of asset management companies and investment firms subject to AMF and/or ACPR approvals, whatever their field of activity (listed securities, real estate, private assets, securitization...)

BELT refers to the concepts of safety, adaptability and regulation.

BELT your digital solution : Digitalization, security, agility, simplicity

The entire control plan is carried out on the platform

Data log and security of your work with an exhaustive vision of the risks

Designed for organizations of all sizes and types

DIGITALIZATION

SECURITY

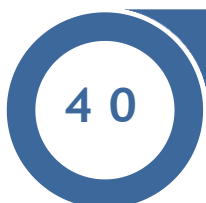

AGILITY

SIMPLICITY

Integrated Agama clients

Experienced consultants use BELT on a daily basis

of continuous tool development

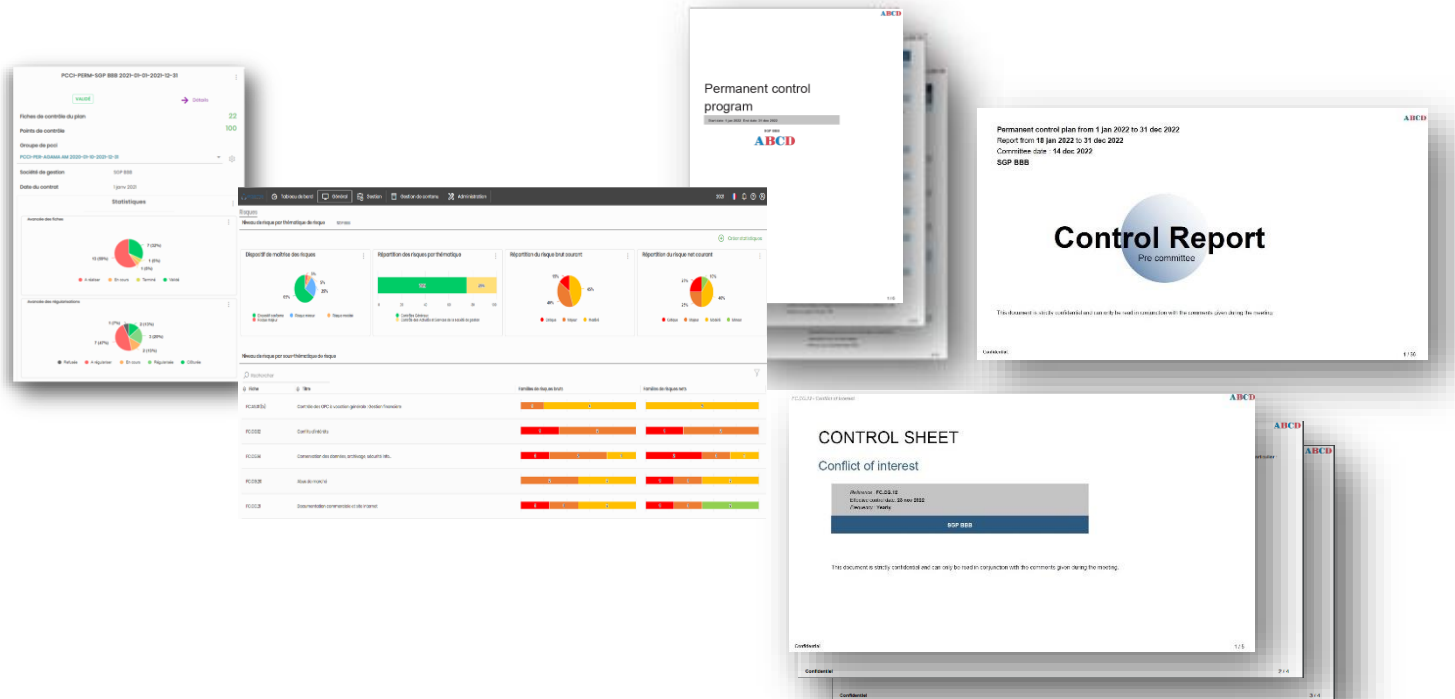

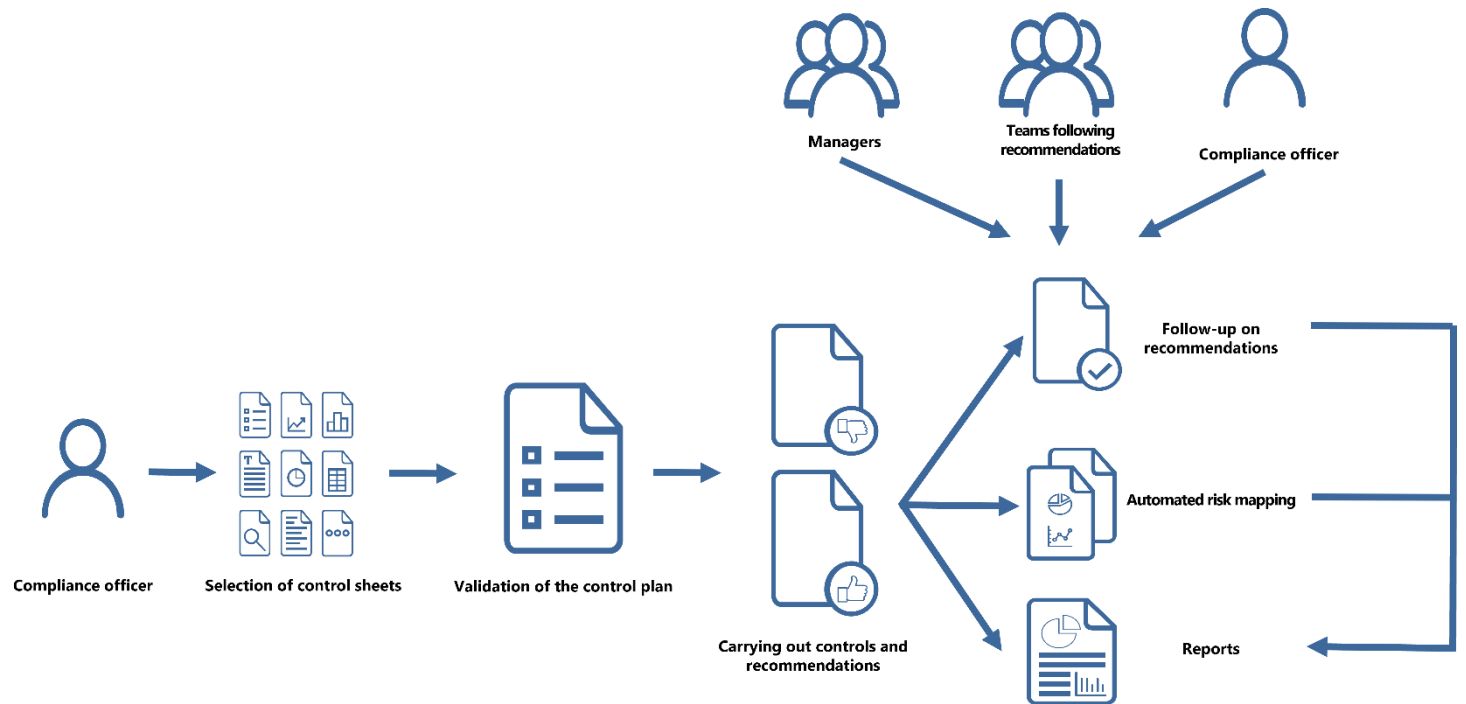

Cybersecurity audit

Strengthen your compliance division

BELT is an innovative and independent digital solution that allows users to manage, monitor and control their compliance and internal control framework, while ensuring the traceability of their activities and following-up on the regulatory changes.

BELT is both a gateway to regulatory records and a compliance monitoring tool. Users can customize the risk matrix which allows a clear and continuous assessment of compliance threats.

Meanwhile, AGAMA Conseil provides the regulatory oversight and contributes, thanks to its positioning and its leading market share on compliance delegation missions, to the regulatory update of the software, the control sheets and the test grids.
